■ Purpose of Exhibition

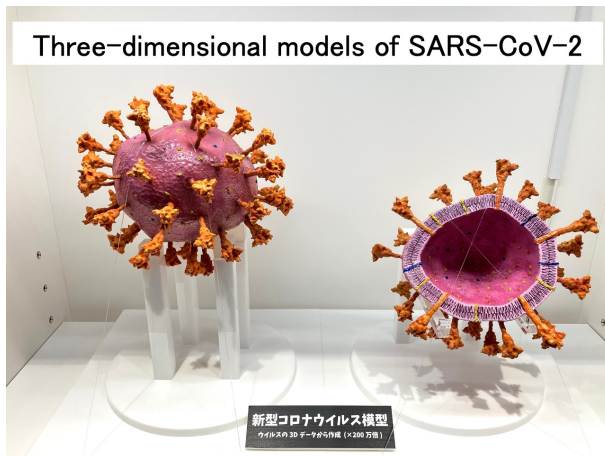

This section covers local news and the latest topics related to the human body.

The video and panels on display can be easily changed for the most current topics.

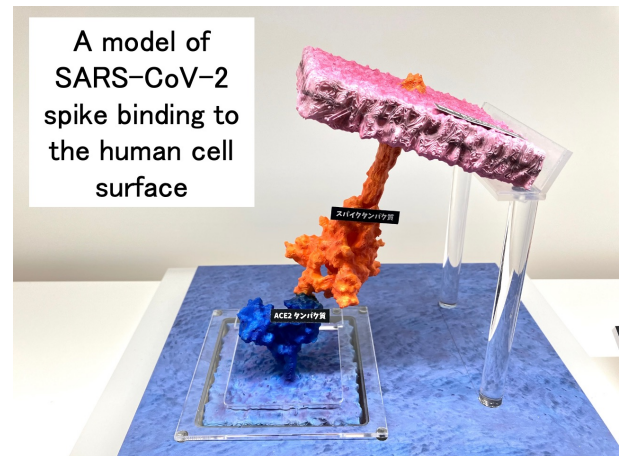

■ Additional Knowledge

Three-dimensional models of SARS-CoV-2

A model of SARS-CoV-2 spike binding to the human cell surface

There is a hexagonal column-shaped showcase in which models can be displayed. The front side of the column has a monitor that plays video, and the other sides have frames that can hold text and posters.

Additional explanatory posters can be put up on the whiteboard on the back wall. The models, video, text, and posters on display can be easily replaced.

The first exhibition features the novel coronavirus (SARS-CoV-2). Basic information on the virus is given on panels. The 3D models on display have been built based on scientific facts with the help of local experts. There are more topics to come. Don't miss them!
